ART UNIT PAPER NUMBER

2137

DATE MAILED: 03/22/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/928,133

Applicant(s)

FINK ET AL.

Examiner

Tamara Teslovich

Art Unit

2137

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 August 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 August 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 10 August 2001.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claims 1-20 are pending.

5

Objections - Specification

The disclosure is objected to because of the following informalities:

Applicant's 'Background of the Invention' cites US Patent Application "METHOD
AND APPARATUS FOR PROVIDING ADAPTIVE SELF-SYNCHRONIZED
DYNAMIC ADDRESS TRANSLATION" but fails to provide the U.S. Patent

10

Application Serial Number (09/927671). Applicant's 'Background of the
Invention' also cites US Patent Application "SLIDING SCALE ADAPTIVE SELF-
SYNCHRONIZED DYNAMIC ADDRESS TRANSLATION" but fails to provide the
U.S. Patent Application Serial Number (09/927979). Appropriate correction is
required.

15

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
U.S.C. 102 that form the basis for the rejections under this section made in this

20

Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in
public use or on sale in this country, more than one year prior to the date of application for patent in
the United States.

25

Art Unit: 2137

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kraemer et al. (U.S. Patent No. 5,798,706).

As per Claim 1, Kraemer et al. discloses an apparatus for detecting

5 adversarial activity on a network, comprising:

 a memory adapted to store a host table (see col.3 lines 46-60);

 a key exchanger adapted to derive a cipher key (see page 2 of WIPO Publication No. 97/26734 -- incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN");

10 a translator adapted to translate predetermined portions of packet header information of a data packet according to a cipher algorithm keyed by the cipher key (see page 2 of WIPO Publication No. 97/26734 -- incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN"), wherein the predetermined portions include an address (see col.4 lines 33-46);

15 a mapping device adapted to map the address to the host table (see col.3 line 60 thru col.4 line 2); and

 an actuator adapted to trigger a security device when the address does not match an entry in the host table (see col.4 lines 3-5 and 20-32).

20 As per Claim 2, Kraemer et al. discloses an apparatus as set forth in Claim 1, wherein the security device is a logging device adapted to log the data packet (see col.4 lines 3-5 and 26-31).

Art Unit: 2137

As per Claim 3, Kraemer et al. discloses an apparatus as set forth in Claim 1, wherein the security device is adapted to signal an alarm when triggered (see col.2 lines 27-31 and col.4 lines 20-25).

5 As per Claim 4, Kraemer et al. discloses an apparatus as set forth in

Claim 1, further comprising:

a host resolution device adapted to derive the host table using an address resolution protocol (see col.4 lines 48-52).

10 As per Claim 5, Kraemer et al. discloses an apparatus as set forth in

Claim 1, further comprising:

a network device adapted to place the data packet onto a network when the address maps to the host table (col.1 line 66 through col.2 line 9 and col.2 lines 27-31).

15

As per Claim 6, Kraemer et al. discloses a method for detecting adversarial activity on network, comprising:

storing a host table (see col.3 lines 46-60);

deriving a cipher key (see page 2 of WIPO Publication No. 97/26734 --

20 incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN");

translating predetermined portions of packet header information of a data packet according to a cipher algorithm keyed by the cipher key (see page 2 of WIPO Publication No. 97/26734 -- incorporated by Kraemer et al. in col.3 lines

Art Unit: 2137

40-45, reference "VPN"), wherein the predetermined portions include an address
(see col.4 lines 33-46);

mapping the address the host table (see col.3 line 60 thru col.4 line 2);

and

5 triggering a security device when the address does not match an entry in
the host table (see col.4 lines 3-5 and 20-32).

As per Claim 7, Kraemer et al. discloses a method as set forth in Claim 6,
further comprising:

10 logging the data packet when the address does not match an entry in the
host table (see col.4 lines 3-5 and 26-31).

As per Claim 8, Kraemer et al. discloses a method as set forth in Claim 6,
further comprising:

15 signaling an alarm when the security device is triggered (see col.2 lines
27-31 and col.4 lines 20-25).

As per Claim 9, Kraemer et al. discloses a method as set forth in Claim 6,
further comprising:

20 deriving the host table using an address resolution protocol (see col.4
lines 48-52).

Art Unit: 2137

As per Claim 10, Kraemer et al. discloses a method as set forth in Claim 6, further comprising:

placing the data packet onto a network when the address maps to the host table (see col.4 lines 3-5 and 26-31).

5

As per Claim 11, Kraemer et al. discloses a device for detecting adversarial activity on a network, comprising:

means for storing a host table (see col.3 lines 46-60);

means for deriving a cipher key (see page 2 of WIPO Publication No.

10 97/26734 -- incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN");

means for translating predetermined portions of header information of a data packet according to a packet cipher algorithm keyed by the cipher key (see page 2 of WIPO Publication No. 97/26734 -- incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN"), wherein the predetermined portions include

15 an address (see col.4 lines 33-46);

means for mapping the address to the host table (see col.3 line 60 thru col.4 line 2); and

means for triggering a security device when the address does not match an entry in the host table (see col.4 lines 3-5 and 20-32).

20

As per Claim 12, Kraemer et al. discloses a device as set forth in Claim 11, further comprising:

Art Unit: 2137

means for logging the data packet when the address does not match an entry in the host table (see col.4 lines 3-5 and 26-31).

As per Claim 13, Kraemer et al. discloses a device as set forth in Claim

5 11, further comprising:

means for signaling an alarm when the security device is triggered (see col.2 lines 27-31 and col.4 lines 20-25).

As per Claim 14, Kraemer et al. discloses a device as set forth in Claim

10 11, further comprising:

means for deriving the host table using an address resolution protocol (see col.4 lines 48-52).

As per Claim 15, Kraemer et al. discloses a device as set forth in Claim

15 11, further comprising:

means for placing the data packet network when the address maps to the host table (see col.4 lines 3-5 and 26-31).

As per Claim 16, Kramer et al. discloses a bastion host adapted for

20 processing packet header information of a data packet, the bastion host being operable to:

store a host table (see col.3 lines 46-60);

Art Unit: 2137

derive a cipher key (see page 2 of WIPO Publication No. 97/26734 --
incorporated by Kraemer et al. in col.3 lines 40-45, reference "VPN");

translate predetermined portions of packet header information of a data
packet according to a cipher algorithm keyed by the cipher key (see page 2 of
5 WIPO Publication No. 97/26734 -- incorporated by Kraemer et al. in col.3 lines
40-45, reference "VPN"), wherein the predetermined portions include an address
(see col.4 lines 33-46);

map the address to the host table (see col.3 line 60 thru col.4 line 2); and
trigger a security device when the address does not match an entry in the
10 host table (see col.4 lines 3-5 and 20-32).

As per Claim 17, Kraemer et al. discloses the bastion host as set forth in
Claim 16, the bastion host being further operable to log the data packet when the
address does not match an entry in the host table (see col.4 lines 3-5 and 26-31).
15

As per Claim 18, Kraemer et al. discloses the bastion host as set forth in
Claim 16, the bastion host being further operable to signal an alarm when the
security device is triggered (see col.2 lines 27-31 and col.4 lines 20-25).

20 As per Claim 19, Kraemer et al. discloses the bastion host as set forth in
Claim 16, the bastion host being further operable to deriving the host table using
an address resolution protocol (see col.4 lines 48-52).

Art Unit: 2137

As per Claim 20, Kraemer et al. discloses the bastion host as set forth in Claim 16, the bastion host being further operable to place the data packet onto a network when the address maps to the host table (see col.4 lines 3-5 and 26-31).

5

Claims 1-3, 5-8, 10-13, 15-18, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Deng et al. (U.S. Patent No. 6,701,432 B1).

As per Claim 1, Deng et al. discloses an apparatus for detecting

10 adversarial activity on a network, comprising:

a memory adapted to store a host table (see col.5 line 61 thru col.6 line 23 and col.9 lines 1-20);

a key exchanger adapted to derive a cipher key (see col.10 lines 13-51);

a translator adapted to translate predetermined portions of packet header
15 information of a data packet according to a cipher algorithm keyed by the cipher key, wherein the predetermined portions include an address (see col.10 lines 13-51);

a mapping device adapted to map the address to the host table (see col.6 lines 16-48 and col.7 lines 1-5); and

20 an actuator adapted to trigger a security device when the address does not match an entry in the host table (see col.9 lines 45-49).

Art Unit: 2137

As per Claim 2, Deng et al. discloses an apparatus as set forth in Claim 1, wherein the security device is a logging device adapted to log the data packet (see col.9 lines 45-49).

5 As per Claim 3, Deng et al. discloses an apparatus as set forth in Claim 1, wherein the security device is adapted to signal an alarm when triggered (see col.9 lines 45-49).

As per Claim 5, Deng et al. discloses an apparatus as set forth in Claim 1,
10 further comprising:

a network device adapted to place the data packet onto a network when the address maps to the host table (col.9 lines 50-57).

As per Claim 6, Deng et al. discloses a method for detecting adversarial
15 activity on network, comprising:

storing a host table (see col.5 line 61 thru col.6 line 23 and col.9 lines 1-20);

deriving a cipher key (see col.10 lines 13-51);

translating predetermined portions of packet header information of a data
20 packet according to a cipher algorithm keyed by the cipher key, wherein the predetermined portions include an address (see col.10 lines 13-51);

mapping the address the host table (see col.6 lines 16-48 and col.7 lines 1-5); and

Art Unit: 2137

triggering a security device when the address does not match an entry in the host table (see col.9 lines 45-49).

As per Claim 7, Deng et al. discloses a method as set forth in Claim 6,

5 further comprising:

logging the data packet when the address does not match an entry in the host table (see col.9 lines 45-49).

As per Claim 8, Deng et al. discloses a method as set forth in Claim 6,

10 further comprising:

signaling an alarm when the security device is triggered (see col.9 lines 45-49).

As per Claim 10, Deng et al. discloses a method as set forth in Claim 6,

15 further comprising:

placing the data packet onto a network when the address maps to the host table (col.9 lines 50-57).

As per Claim 11, Deng et al. discloses a device for detecting adversarial

20 activity on a network, comprising:

means for storing a host table (see col.5 line 61 thru col.6 line 23 and col.9 lines 1-20);

means for deriving a cipher key (see col.10 lines 13-51);

Art Unit: 2137

means for translating predetermined portions of header information of a data packet according to a packet cipher algorithm keyed by the cipher key, wherein the predetermined portions include an address (see col.10 lines 13-51);

means for mapping the address to the host table (see col.6 lines 16-48
5 and col.7 lines 1-5); and

means for triggering a security device when the address does not match an entry in the host table (see col.9 lines 45-49).

As per Claim 12, Deng et al. discloses a device as set forth in Claim 11,
10 further comprising:

means for logging the data packet when the address does not match an entry in the host table (see col.9 lines 45-49).

As per Claim 13, Deng et al. discloses a device as set forth in Claim 11,
15 further comprising:

means for signaling an alarm when the security device is triggered (see col.9 lines 45-49).

As per Claim 15, Deng et al. discloses a device as set forth in Claim 11,
20 further comprising:

means for placing the data packet network when the address maps to the host table (col.9 lines 50-57).

Art Unit: 2137

As per Claim 16, Deng et al. discloses a bastion host adapted for processing packet header information of a data packet, the bastion host being operable to:

store a host table (see col.5 line 61 thru col.6 line 23 and col.9 lines 1-20);

5 derive a cipher key (see col.10 lines 13-51);

translate predetermined portions of packet header information of a data packet according to a cipher algorithm keyed by the cipher key, wherein the predetermined portions include an address portions include an address (see col.10 lines 13-51);

10 map the address to the host table (see col.6 lines 16-48 and col.7 lines 1-5); and

trigger a security device when the address does not match an entry in the host table (see col.9 lines 45-49).

15 As per Claim 17, Deng et al. discloses the bastion host as set forth in Claim 16, the bastion host being further operable to log the data packet when the address does not match an entry in the host table (see col.9 lines 45-49).

20 As per Claim 18, Deng et al. discloses the bastion host as set forth in Claim 16, the bastion host being further operable to signal an alarm when the security device is triggered (see col.9 lines 45-49).

As per Claim 20, Deng et al. discloses the bastion host as set forth in Claim 16, the bastion host being further operable to place the data packet onto a network when the address maps to the host table (col.9 lines 50-57).

5

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

10

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15

Claims 4, 9, 14, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deng as applied to claims 1, 6, 11, and 16 above, and further in view of Kraemer et al. (U.S. Patent No. 5,798,706).

20

As per Claim 4, Deng et al. discloses an apparatus as set forth in Claim 1, but fails to disclose a host resolution device adapted to derive the host table using an address resolution protocol.

25

Kraemer et al. discloses a host resolution device adapted to derive the host table using an address resolution protocol (see col.4 lines 48-52).

It would have been obvious to a person of average skill in the area at the time of the invention to include within Deng's apparatus for detecting adversarial

Art Unit: 2137

activity on a network Kraemer's ARP derived host table in order that an administrator without knowledge of the hardware addresses of the devices connected to the network, need not be burdened with entering by hand the MAC addresses of each device.

5

As per Claim 9, Deng et al. discloses a method as set forth in Claim 6, but fails to disclose deriving the host table using an address resolution protocol.

Kraemer et al. discloses deriving the host table using an address resolution protocol (see col.4 lines 48-52).

10

It would have been obvious to a person of average skill in the area at the time of the invention to include within Deng's apparatus for detecting adversarial activity on a network Kraemer's ARP derived host table in order that an administrator without knowledge of the hardware addresses of the devices connected to the network, need not be burdened with entering by hand the MAC

15

addresses of each device.

As per Claim 14, Deng et al. discloses a device as set forth in Claim 11, but fails to disclose means for deriving the host table using an address resolution protocol.

20

Kraemer et al. discloses deriving the host table using an address resolution protocol (see col.4 lines 48-52).

It would have been obvious to a person of average skill in the area at the time of the invention to include within Deng's apparatus for detecting adversarial

Art Unit: 2137

activity on a network Kraemer's ARP derived host table in order that an administrator without knowledge of the hardware addresses of the devices connected to the network, need not be burdened with entering by hand the MAC addresses of each device.

5

As per Claim 19, Deng et al. discloses the bastion host as set forth in Claim 16, but fails to disclose the bastion host being further operable to deriving the host table using an address resolution protocol ().

Kraemer et al. discloses the bastion host being further operable to deriving
10 the host table using an address resolution protocol (see col.4 lines 48-52).

It would have been obvious to a person of average skill in the area at the time of the invention to include within Deng's apparatus for detecting adversarial activity on a network Kraemer's ARP derived host table in order that an administrator without knowledge of the hardware addresses of the devices
15 connected to the network, need not be burdened with entering by hand the MAC addresses of each device.

Conclusion

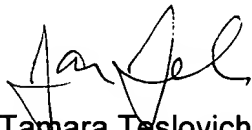

20 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tamara Teslovich whose telephone number is (571) 272-4241. The examiner can normally be reached on Mon-Fri 8-4:30.

Art Unit: 2137

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on (571) 272-3868. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
